

Dimiscar Gel

Silicone Gel

DIMISCAR Gel is an anti-scar gel. It is an advanced scar formula that contains SILICONE GEL WITH CCP TECHNOLOGY (CYCLOMETHICONE NF-5, UTMF CERAMIDE III, AND POLYDIMETHYL SILOXANE) AND PRO - VITAMIN C.

INDICATION

DIMISCAR GEL works on elevated scars that occur due to surgery, cuts and burns, scratches and even insect bites. Vitamin C helps with photo-reception which improves hyperpigmentation at the site of the scar. This lightening effect helps to better conceal the scar or make it less noticeable.

DIMISCAR GEL is suitable for any type of elevated scars on face.

DIRECTIONS FOR USE

Take a drop of gel onto the fingertip and apply once in the same direction on the skin's scarred areas. Allow it to dry for 3-5 minutes. Do not spread it back and forth. Apply twice daily or as directed by the doctor.
